How to pull solar power lines

Overview

Mark Mrohs displays how to Pull DC Wires from Inverter to Solar Array in a residential solar roof install. This video is an actual field example of Interplay's Solar Training Simulations. In addressing the query regarding how to pull up the solar power line, the following points provide a direct response: 1. Ensure that all safety protocols are followed to minimize risks. Pulling not just one, but 3 wires, each 104 feet long, 6 gauge THHN through 100 feet of conduit. I'm pulling this through a one inch PVC conduit. I found my local electrical supplier had the best price for THHN wire. Ensuring safety measures are in place before starting the installation, 3. Regardless of the style, these systems organize and protect cables for the life of the solar system. The result?

Cleaner, manageable layouts, more efficient. Scroll to the bottom of any page to find a sun or moon icon to turn dark mode on or off! Pulling 17 wires through 230ft of conduit?

Wanted to do a sanity check that I wouldn't be crazy to try and pull (16) 10 AWG XHHW-2 wires plus one 4 AWG (one of the existing cables which I will reuse) through.

How to pull solar power lines

How to Pull 100 Feet of Solar PV Wire Through Conduit

I'm using a shop vac (wet/dry vacuum) to suck a string through the conduit first, then pull a webbing, then pull the wires. The best webbing to use is called "Mule Tape". Mule tape, or Mule
