Huijue solar Power Station in the Democratic Republic of the Congo generates electricity

Overview

The project will bring 30 MW of round-the-clock clean energy to the Kamoakakula complex in the Democratic Republic of Congo (DRC) through a 222 MW solar PV plant and a 526 MWh battery energy storage system (BESS). 5% to 16% of the population has access to electricity. This hampers the country's economic development and leaves millions impoverished; it also hampers industry and the mining sector. For decades, the DRC government has prioritized the development of the proposed Inga Dam. Revised in September 2023, this map provides a detailed view of the power sector in DR Congo. The locations of power generation facilities that are operating, under construction or planned are shown by type - including liquid fuels, natural gas, coal, hybrid, hydroelectricity, solar PV and methane. As the world shifts towards renewable energy sources, the DRC is positioning itself to harness solar power through utility-scale solar projects. The DRC ranks first in Africa in terms of its potential (100,000 MW), which accounts for 13% of the global hydropower potential.

Product Model
 HJ-ESS-215A(100KW/215KWh)
 HJ-ESS-115A(50KW/115KWh)

Dimensions
 1600*1280*2200mm
 1600*1200*2000mm

Rated Battery Capacity
 215KWH/115KWH

Battery Cooling Method
 Air Cooled/Liquid Cooled

COMMUNICATION BASE STATION GREEN ENERGY HUIJIE ...

Could the Congo become an electricity exporter? Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more.
