Hungary on energy storage systems

Overview

The Hungarian government has launched a residential energy storage program with a budget of HUF 100 billion. 5 million to support the purchase. Author: Centre for Alternative Technology. Gergely Gulyás emphasized that this is key to ensuring that families with solar panels can remain. Hungary's subsidy scheme for energy storage will drive huge growth in battery energy storage system (BESS) deployments over the next few years. Hungary has 40MWh of grid-scale BESS online today but that will jump 3,400% to around 1,300MWh over the next few years thanks to opex and capex support. The country's National Energy Strategy initially set a target of 6 GW of solar photovoltaic (PV) capacity by 2030 - a goal that seemed ambitious at the time. The revised 2030 target now.
