# **Hybrid energy maintenance of base station room in South Sudan**

## Overview

---

This paper aims to address both the sustainability and environmental issues for cellular base stations in off-grid sites. For cellular network operators, decreasing the operational. Despite promising solar potential in South Sudan, rural electrification has long been an issue for the country's growth and development, as well as addressing climate change and fuel cost limits. The International Energy Agency forecasts 78% of new telecom infrastructure in developing nations will adopt. Atlas Copco's hybrid & energy storage system is the solution. How does a hybrid & energy storage system work?

Whenever possible, the hybrid & energy storage system. This hybrid system can take advantage of the complementary nature of solar and wind energy: solar panels produce more electricity during sunny days when the wind might not be blowing, and wind turbines can generate electricity at night or during cloudy days when solar panels are less effective. Many benefits are expected when the base stations, the fundamental part of this energy consumption, are equipped with renewable energy (RE) systems.
