

**PIENAAR ENERGY (PTY) LTD**

# **Hydropower thermal power wind power solar power**

## Overview

---

Most electricity is generated with steam turbines that use fossil fuels, nuclear, biomass, geothermal, or solar thermal energy. Energy Information. The five primary types are solar, wind, hydropower, biomass, and geothermal. What they have in common is that, during use, they emit little to no harmful pollutants, which helps in the fight against greenhouse gases and climate change. It highlights the principles, applications, and technological developments of each method in generating sustainable electricity. Each one offers its own tools and benefits. These energy sources use nature—sun, wind.
