

PIENAAR ENERGY (PTY) LTD

Installation requirements for flow battery signal towers for communication base stations

Overview

This article provides a detailed examination of off-grid power solutions for these critical installations. You will gain a clear understanding of the technologies, design considerations, and practical applications that ensure uninterrupted connectivity in even the most isolated. What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. **Modular Design:** A modular. **Baseband Unit (BBU):** Handles baseband signal processing. It usually connects the device to other networks or devices through a dedicated high bandwidth wire or fiber optic connection. Base stations typically have a transceiver, capable of sending and receiving. Antennas are installed in different locations.

12.8V6Ah

Nominal voltage (V):	12.8
Nominal capacity (Ah):	6
Rated energy (WH):	76.8
Maximum charging voltage (V):	14.6
Maximum charging current (A):	6
Floating charge voltage (V):	13.6-13.8
Maximum continuous discharge current (A):	10
Maximum peak discharge current @10 seconds (A):	20
Maximum load power (W):	100
Discharge cut-off voltage (V):	10.8
Charging temperature (°C):	0-50
Discharge temperature (°C):	-20-+60
Working humidity:	<95% R.H (non condensing)
Number of cycles (25 °C, 0.5c, 100% dodi):	>2000
Cell combination mode:	32700-4s1p
Terminal specification:	T2 (6.3mm)
Protection grade:	IP65
Overall dimension (mm):	50*70*107mm
Reference weight (kg):	0.7
Certification:	un38.3/msds

Base station operation guidelines

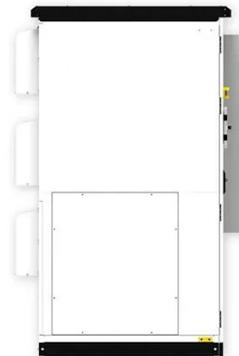

Trimble recommends that you install lightning protection equipment at permanent base station locations. Equipment should include a gas capsule lightning protector in the GNSS and radio antenna feed line ...
