

**PIENAAR ENERGY (PTY) LTD**

# **Internal cell connection of solar panels**

## Overview

---

When all PV cells are wired in series (the positive of the first cell connects to the negative of the second cell) and then encapsulated within a frame, it forms a PV module with two terminals that are referred to as the positive and negative terminals. Though many electrical and mechanical components are used while installing solar panels, below is a list of the basic components.

**Solar Panels:** They are considered the backbone of a solar system, made up of different PV cells connected in parallel or series. Solar panels capture sunlight and use. PV modules consist of cells, which are sensitive to solar radiation.

Wiring solar panels together incorrectly can lead to damaging or destroying valuable components — it can even be. This solar panel wiring guide explains different methods and includes practical wiring diagrams and actual examples of ways to design a reliable and efficient solar power system. In this article we will teach you.

### Wiring within a PV Module and the Shading Effect

First of all, let's start with the wiring of PV cells inside a PV module as shown in Figure 2.3, where the cell connections for a typical commercial 250W panel with 60 cells is illustrated.
