# **Inverter connection to the grid for small communication base stations in Bosnia and Herzegovina**

## Overview

---

This paper proposes an innovative concept of dispatching GFM sources (inverters and synchronous generators) to output the target power in both grid-connected and islanded mode. This reference design implements single-phase inverter (DC/AC) control using a C2000™. This paper proposes an innovative concept of dispatching GFM sources (inverters and synchronous generators) to output the target power in both grid-connected and islanded mode. This reference design implements single-phase inverter (DC/AC) control using a C2000™. Among the potential applications of repurposed EV LIBs, the use of these batteries in communication base stations (CBSs) is one of the most promising candidates owing to the large-scale onsite energy storage demand (Heymans et al. The one-stop energy storage system for. Grid-connected PV inverters have traditionally been thought as active power sources with an emphasis on maximizing power extraction from the PV modules. Bosnia and Herzegovina has shown interest in increasing its use of renewable energy sources to diversify its energy mix and reduce dependence on conventional energy sources. This would result in a more flexible, reliable, and renewable power supply. Can grid-connected PV inverters improve utility grid. This article aims to reduce the electricity cost of 5G base stations, and optimizes the energy storage of 5G base stations connected to wind turbines and photovoltaics.
