

**PIENAAR ENERGY (PTY) LTD**

# **Is it okay to install photovoltaic panels at a 45 degree angle**

## Overview

---

The ideal angle for solar panels varies approximately between 30 to 45 degrees, primarily influenced by the geographical latitude of the installation site. Let's unpack why this specific angle works so well. At 45 degrees, panels achieve year-round balance: According to the 2023 Gartner Emerging Tech. In general, solar panels should be installed so the sunlight hits them at as close to a perpendicular 90-degree angle for as long as possible during the day. Every day, the sun also moves across the heavens from east to west. Latitude plays a significant role; panels should be installed at an angle equal to the. Positioning solar panels at the best angle is essential for maximizing the efficiency of your solar energy system. Factors like geographic location, season, tracking capability, and.

## Is it okay to install photovoltaic panels at a 45 degree angle

---

### What's the Best Angle for Solar Panels? , EnergySage

For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy. That ...
