Is it possible to install photovoltaic panels on the roof of a construction site

Overview

Yes—it's possible, but it depends on the roof's structural condition. While age isn't always the issue, a roof with visible damage, leaks, or deteriorating materials can pose a risk to both the installation and the longevity of the solar system. Professional Installation is Critical for Safety and Warranties: Solar panel mounting involves working at dangerous heights with structural modifications that can void warranties if done incorrectly. Professional installation typically includes 5-25 year warranties and ensures compliance with 2025. Solar PV now has a solid footing in the residential market, and the building codes have caught up—here's what you need to know. Placing PV panels on residential roofs is a balancing act between getting the most possible wattage and creating safe pathways for first. Mounting solar panels on a roof surface to create a solar power system is known as rooftop solar mounting.
