Is the number on the inverter the voltage

Overview

Input voltage indicates the DC voltage required to operate the inverter. Inverters generally have an input voltage of 12V, 24V, or 48V. PV designers should choose the PV array. A solar inverter display typically shows information about the current power output, total energy production, and any system errors or issues.

The numbers on an inverter indicate the maximum amount of power that the device can handle. The first number is the continuous power rating, which is the amount of power that the inverter can produce for an extended period of time without damaging the unit. The second number is the surge power rating, which is the amount of power that the inverter See more on thepowerfacts Published: psu

Interpreting inverter datasheet and main parameters , AE 868

Each inverter comes with a voltage range that allows it to track the maximum power of the PV array. It is recommended to match that range when selecting the inverter and the PV array parameters.
