# **Kyiv Industrial Uninterruptible Power Supply Plant**

## Overview

---

A major power plant near Kyiv was reportedly completely destroyed today in a Russian missile and drone attack, part of the continued campaign being waged against Ukrainian energy infrastructure across the country. In Kyiv, the most difficult situation with electricity supply is in the area that was powered by CHP-4; restoration of heat supply is not expected there in the near future. Energy workers are trying to provide improved electricity supply schedules, with 64 repair crews involved. Strikes on January 9 and 13 forced a complete shutdown of one generating facility. Around 8 million households lost power without warning; the capital, Kyiv, experienced its first unscheduled. Ukraine faces power deficits caused by Russian attacks on its energy system, forcing Kyiv to temporarily restrict power supply to businesses and industrial facilities on April 23, Ukraine's state-owned energy operator Ukrenergo reported.
