# Making a solar generator out of sand

## Overview

---

In this video I show step by step how to build a solar powered sand battery with used panels, the heating element from a water heater and some sand from home depot. I generated over 250F in just a few hours. In this article, we will explore the potential advantages and disadvantages of using sand as a battery. A research project aims to design, build, and test a sand battery for household heating purposes, replacing traditional geyser systems. Another option is a thermal battery, which basically means making something hot, and later extracting that heat again. Do you have what it takes to make one yourself?

My family owns a cozy off-grid cabin in the hills, but since there's no electricity, I'd only stay there.
