

PIENAAR ENERGY (PTY) LTD

Mass production of photovoltaic support push rods

Overview

During production processes, the circular tubular main bodies of the stay rods remain original shapes without being subjected to artificial intervention, so as to improve the structural durability and the bending resistance of the stay rods, thus ensuring the use performance. During production processes, the circular tubular main bodies of the stay rods remain original shapes without being subjected to artificial intervention, so as to improve the structural durability and the bending resistance of the stay rods, thus ensuring the use performance. Photovoltaic power generation is a power generation technology that uses photovoltaic panels to receive sunlight and convert solar energy into electrical energy. It is more environmentally friendly than thermal power generation, and has lower environmental requirements than hydropower generation. Enhancing the reliability of photovoltaic structures is essential for achieving sustainable development. This study involved the analysis of a photovoltaic power generation project in Hubei Province to compare differences in the structural loads of photovoltaic supports as outlined in Chinese. A photovoltaic support and push rod technology is applied in the support structure of photovoltaic modules, photovoltaic power generation, photovoltaic modules and other directions, which can solve the problems of increasing the weight and cost of push rods, and achieve the effect of improving. An oblique uniaxial tracking support for photovoltaic power generation comprises main shafts (2) and assembly purlines (11) fixedly installed on the main shafts (2). The utility model relates to an outer tube with radial through holes, a transmission assembly, a bracket and an execution assembly, wherein the transmission assembly comprises a support assembly arranged at two ends of the radial.

Mass production of photovoltaic support push rods

Electric push rod provided with built-in microswitches and

By means of the above mode, the electric push rod provided with the built-in microswitches and the encoder and used for driving the photovoltaic solar bracket can realize ...
