Method for constructing interconnected microgrid groups

Overview

Hence, this paper gives an overview of all the possible schemes for integrating microgrids of various urban community buildings. In the present scenario, the demand for electricity is growing rapidly due to industrialization around the world. This complexity ranges from the inclusion of grid forming inverters, to integration with interdependent systems like thermal, natural gas. DOE RD&D activities drive grid technology evolution to support grid modernization and provide long-term transformational strategies to ensure that electricity delivery systems can support evolving generation and new types of loads, including distributed energy resources, while operating reliably. Enter interconnected microgrid groups – the rockstars of decentralized energy systems. So, this creates major burden on the utility.
