# Microcrystalline heterojunction photovoltaic panels

## Overview

---

In HJT cells, an n-type crystalline silicon (c-Si) wafer is sandwiched between intrinsic amorphous silicon (i-a-Si:H) layers. Heterojunction solar panels are assembled similarly to standard homojunction modules, but the singularity of this technology lies in the solar cell itself. But what makes it stand out from technologies like PERC and TOPCon?

How does HJT achieve these advantages?

In the "All About Heterojunction" series, we will delve into. Flex your power with REC Alpha's HJT cells and invest in long-lasting solar power today! REC Alpha's HJT panels deliver more power even at the hottest times. Stay cool and powered up with REC! Maximize energy with bifacial HJT cells from REC Alpha. Capture sunlight from both sides! REC Alpha solar. The HJT cell, short for Heterojunction with Intrinsic Thin Layer (also referred to as HIT), features a symmetrical double-sided structure centered around an N-type crystalline silicon core.

## Heterojunction solar cell

OverviewHistoryAdvantagesDisadvantagesStructureLoss mechanismsGlossary

Heterojunction solar cells (HJT), variously known as Silicon heterojunctions (SHJ) or Heterojunction with Intrinsic Thin Layer (HIT), are a family of photovoltaic cell technologies based on a heterojunction formed between semiconductors with dissimilar band gaps. They are a hybrid technology, combining aspects of conventional crystalline solar cells with thin-film solar cells.
