

Microgrid Typical Solutions

Overview

A typical microgrid scope has a dispatchable distributed energy resource (dDER), another energy resource such as a solar PV, and a storage system such as a battery energy storage system (BESS). Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. Microgrids are small-scale power generation and distribution systems containing loads, including thermal loads, and DERs such as distributed engines, renewable energy sources, and storage systems. They can operate as an isolated system or with clearly defined physical and electrical boundaries when. wable energies that cannot be ramped up and down at will. They provide grid stability, voltage and frequency control, instantaneous power, plus the ability to de-couple peaks in generation from e both cost and the operator's environmental footprint. Coalition stakeholders include the City of Oakridge, South Willamette Solutions, Lane County, Oakridge Westfir Area Chamber of Commerce, Good Company/Parametrix, Oakridge Trails. Microgrid Solar Systems Are More Than Backup Power: Unlike traditional backup generators, solar microgrids can operate indefinitely during outages and provide continuous economic benefits through reduced electricity bills, demand charge reductions, and potential revenue generation from grid.

Microgrid Typical Solutions

Microgrids 101

Presentation was intended to build foundational understanding of energy resilience, reliability, and microgrids.

TAX FREE 

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW/115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

ENERGY STORAGE SYSTEM

Microgrid Solutions , Applications , Jenbacher

A typical microgrid scope has a dispatchable distributed energy resource (dDER), another energy resource such as a solar PV, and a storage system such as a battery energy storage system (BESS).

Home Energy Storage (Stackble system)

- Product Introduction**
- Scalable from 10kWh to 50kWh
 - Self-Consumption Optimization
 - Integrated with inverter to avoid the compatibility problem
 - LFP battery, safest and long cycle life
 - Stackable design, effortless installation
 - Capable of High-Powered Emergency Backup and Off-Grid Function

48V 100Ah
