

PIENAAR ENERGY (PTY) LTD

Microgrid for aquaculture ponds

Overview

A typical solar-powered pond aeration microgrid includes: 10 kW PV array, roof- or raft-mounted. 80 kWh lithium-iron-phosphate (LFP) battery for overnight storage. IoT DO sensors streaming real-time data. Shrimp farms are energy-intensive, with pond aeration accounting for up to 60% of total energy use. Paddle wheel systems often run continuously to maintain dissolved oxygen (DO) levels, traditionally powered by diesel generators. This reliance on fossil fuel drives up costs, carbon emissions, and. It is a statutory authority within the portfolio of the federal Minister for Agriculture, Fisheries and Forestry, jointly funded by the Australian Government and the fishing industry. In submitting this report, the researcher has agreed to FRDC publishing this material in its edited form. mind targets like environmental sustainability, energy affordability, reliability and security.

Microgrid for aquaculture ponds

(PDF) Optimal microgrid design and operation for

This paper, therefore, proposes an optimal microgrid by multi-objective functions for the shrimp aquaculture industry. The proposed system harnesses renewable energy resources to power ...
