

PIENAAR ENERGY (PTY) LTD

Mongolia installs solar power generation for home use

Overview

Under the program, URECA and GerHub convert traditional ger dwellings by adding insulation and switching from coal stoves to electric heating systems with residential photovoltaic systems for their heating needs. Mongolia has set an ambitious goal: to supply 30% of its energy from renewable sources by 2030. Despite significant challenges like infrastructure gaps and. dscape for wind and solar in Mongolia as of June 2024. Here, we discuss legislation and financing for renewable energy sources, as well as regulation regarding the social and environmental impacts of renewable energy projects. We also give an overview of institutions and civil society stakeholders. Since TAF's partnership with URECA and GerHub on the Coal-to-Solar pilot project began in 2022, the initiative has been generating international attention and support from development banks and multilateral international organizations. The Renewable Energy for Rural Access Project (REAP) aimed to do just this by delivering 100,000 SHS. Nicknamed "The Land of Eternal Blue Sky," Mongolia's climate makes it a prime location for solar power generation, especially in the South Gobi region. Across the country, the number of sunny days averages 270 to 300 days per year, equivalent to 2,250 to 3,300 sunshine hours.
