

**PIENAAR ENERGY (PTY) LTD**

# **Multicrystalline photovoltaic panels have color difference**

## Overview

---

While monocrystalline panels are typically black and multicrystalline panels are usually blue, the color does not affect their performance. Most solar panels have a blue hue, although some panels are black. The source of this color difference comes from how light interacts with two types of solar panels: monocrystalline and polycrystalline. Color: Blue with a speckled appearance.

## Multicrystalline photovoltaic panels have color difference

### Monocrystalline vs. Polycrystalline Solar Panels: Which Is Better?

Polycrystalline solar panels (also known as multi-crystalline or poly panels) are made by melting multiple silicon crystals together. They are then molded into square-shaped ingots and cut ...

### Monocrystalline vs. Polycrystalline Solar Panels: What's the Difference

Look closely and you'll notice some subtle differences, namely the color of the solar cells. Those differences can mean a lot, both in terms of how much they cost and how much electricity
