

PIENAAR ENERGY (PTY) LTD

Net metering price per kWh

Overview

Credits are often not issued at the full retail cost of power under most net metering and solar buyback schemes. The net metering compensation price might be as low as 10 cents per kWh for a household who is normally paid 16 cents per kWh. Xcel Energy's net metering program allows customers to get credit back from excess generation on a bill when the amount of energy a solar panel system generates is greater than the amount of energy consumed from Xcel Energy. Customers receive payment for the excess energy generated. Thankyouforyourpaymentstotaling \$93. This price is for residential net-metered customer who choose to receive compensation. The cost of net metering means the fees and other charges you might pay to your utility company to join the program and connect your solar system to the grid. If your utility pays little for extra solar power but still charges high monthly fees, your bills may not drop much.
