

**PIENAAR ENERGY (PTY) LTD**

# **Niger electrical energy**

## Overview

---

- Niger's Energy & Climate Policy Framework: Niger aims to boost energy capacity to 850 MW by 2030 and achieve 80% electrification by 2035, with a focus on renewables. Recent reforms include sector liberalisation and new regulatory frameworks. Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. Despite challenges, the country is advancing its energy. Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural. The Niger Solar Electricity Access Project (NESAP), aimed at enhancing electricity access in rural and peri-urban areas of Niger through solar energy, started in 2017 and has built 15 solar power plants. 21 TWh, and its low-carbon electricity generation remains minimal, measured at only 1.

## Energy and CO2 in Niger

If all production capacities in Niger for solar, wind, tidal, geothermal and biomass are added together, this results in a share of 3.0% of the total electricity volume for renewable energies excluding wind power plants.

## Niger Energy Information

Niger Total Energy Consumption  
 Niger Crude Oil Production  
 Niger Renewable in % Electricity Production  
 Niger CO2 Fuel

Combustion/Co2 Emissions According to the country's National Renewable Energy Action Plan (2015), renewables (including hydro) were to account for 51% of the installed capacity by 2020 and 58% by 2030; however, the 2020 target was not reached, with renewables representing only 8% of the capacity. The new PDES includes an objective of 15% of solar in the power mix in 2026. See more on enerdata Our World in Data

## Niger - Energy Country Profile - Our World in Data

But the electricity mix -- the balance of sources of electricity in the supply -- is becoming increasingly important as countries try to shift away from fossil fuels towards low-carbon sources of electricity ...
