North-South orientation of solar panels on Vietnamese roofs

ESS

Overview

According to the technical team at Thinh Phong, the orientation of solar panels directly affects the amount of solar irradiation they receive. South-facing is the most optimal direction in Vietnam, providing high and stable output throughout the year. Panel orientation and tilt angle – key factors determining output According to. Orientation Impact is Massive: The difference between optimal and poor solar panel placement can impact energy production by up to 30%, making proper positioning one of the most critical factors in maximizing your solar investment return. Ideally, solar panels should face south in the northern hemisphere (north in the southern hemisphere) to get the most sun exposure. However, not every new building—and certainly not every existing building—can have a south-facing roof surface. Most roof tilts will work well, with a few exceptions. Small roof sizes, unfavorable solar.
