

PIENAAR ENERGY (PTY) LTD

Off-grid solar energy storage cabinetized stadiums vs diesel engines

Overview

When comparing the LCOE of diesel gensets to solar+storage hybrid systems, several factors come into play. Sporting and other big events hosted at stadiums and arenas can consume several megawatts of electricity, to power lighting, broadcasting, essential services and other equipment. The power management infrastructure serving these venues must address critical and operational power needs, as are viewed as a cost-effective alternative to the diesel systems are scalable, reliable, cost-competitive, and storage solutions have minimal variable costs compared to diesel. Maintenance expenses are lower, and the systems do not incur fuel costs, which contributes to a more predictable and. The sun delivers energy daily—diesel, on the other hand, has to be delivered at a price. Cost Efficiency Beyond the Pump Diesel generators may appear affordable upfront, but rising fuel prices and transport costs quickly erode budgets. The techno-economic study of stand-alone hybrid photovoltaic-wind turbine-diesel-battery-converter energy systems.
