One Island Solar Power Generation

Overview

The tiny Scottish island of Eigg has accomplished something remarkable that power companies worldwide are watching closely. Since 2008, this pioneering community has operated the world's first resident-owned, off-grid electric system powered by wind, water and solar. Their autonomous power system. The Malalison Island solar photovoltaic hybrid power plant consists of a 50-kilowatt photovoltaic system with 273-kilowatt-hour lithium-ion batteries and a 54-kilowatt diesel back-up generator designed to produce 200 kilowatts power, around the clock. Photo credit: Courtesy of the Energy Sector. In Pacific island countries, fuel imports accounted for up to 13% of GDP in 2019. Islands – including those that make up the group known as Small Island Developing States (SIDS) – also need to upgrade their energy infrastructure so that it is resilient to higher temperatures, more frequent natural. This study conducts a systematic review of the technical and operational challenges associated with transitioning island energy systems to fully renewable generation, following the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) methodology.
