

**PIENAAR ENERGY (PTY) LTD**

# **Photovoltaic energy concentrating panels**

## Overview

---

Concentrating solar-thermal power (CSP) systems use mirrors to reflect and concentrate sunlight onto receivers that collect solar energy and convert it to heat, which can then be used to produce electricity or stored for later use. It is used primarily in very large power plants. This Amonix system in Las Vegas, US, consists of thousands of small Fresnel lenses, each focusing sunlight to ~500X higher intensity onto a tiny, high-efficiency multi-junction solar cell. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. In this article, we'll delve into the world of CPV, examining its working principles, advantages, challenges, and prospects in solar energy. Concentrator Photovoltaics. Our power generation equipment and instrumentations and controls enable plant operators to make highest efficient use of every single sun beam.

### Concentrator Photovoltaics: Definition, Function, and Types

Concentrator Photovoltaics (CPV) is a technology that harnesses high-intensity sunlight to generate electricity. CPV works by using lenses or mirrors to concentrate light onto solar panels.
