

PIENAAR ENERGY (PTY) LTD

Photovoltaic panel lamination job requirements

 **LFP 280Ah C&I**

Overview

During the lamination process, the prepared 5-layer module is placed in the lamination machine and heated to the max. 135°C for a period of approx. This machine uses heat and pressure to stick different layers of the photovoltaic module together. Solar cells. PV module lamination is a key step in solar panel manufacturing, as it affects the longevity, reliability, and performance of the module. It also provides an example of a typical cycle time for EVA/POE lamination.

Photovoltaic panel lamination job requirements

Solar Panel Lamination Process and Importance

Its main job is to seal and protect solar cells so the panel can work safely for 25+ years. Think of it like laminating an ID card -- but on an industrial level. 1. What Is a Laminator?
