

PIENAAR ENERGY (PTY) LTD

Photovoltaic panel lightning rod

Overview

“Lightning rods” are static discharge devices that are placed above buildings and solar-electric arrays, and connected to ground. They are meant to prevent static charge buildup and the surrounding atmos.

Lightning Protection Rods on Roofs with Solar Panels

When installing lightning protection rods on a roof with solar panels, the goal is to create a system that protects the entire structure without damaging or interfering with the solar energy system.

How to Protect Solar PV Systems from Lightning

Installing lightning rods or conductors near PV arrays can reduce the likelihood of lightning striking PV modules and safely direct the lightning energy into the ground.

How to protect your solar

power system from lightning

In this article, you will learn how to protect your solar power system from lightning. Drawing from decades of installer experience, we'll explore the most cost-effective techniques generally accepted ...

Lightning protection systems in photovoltaic power plants

If the photovoltaic plant is protected with lightning rods, panels are in an external zone but safe from direct strikes. If there is no external lightning protection it will be necessary to install surge protectors ...

Solar Lightning and Lightning Protection

There is some evidence that a few strikes can be prevented with the use of special sharp-pointed "air streamer" lightning rods, which bleed off some of the accumulated charge.
