

## PIENAAR ENERGY (PTY) LTD

# Photovoltaic panel load in factory

**Parallel** (Parallel operation up to 6 unit (only with battery connected))

**AC input wires**

**AC output wires**

## Overview

---

Common for factories: 72-cell or 144-cell half-cut. These pack punch for big needs. A photovoltaic panel factory requires more than just buying equipment and connecting it to power. The difference between a functional facility and a profitable one comes down to facility design, workflow optimization, and selecting equipment that won't become obsolete when cell technology shifts. Governments encourage renewable builds for better power security. It extends grids without massive overhauls. Panels come in types based on cells. More cells often mean bigger size and more. Across India, factories are rapidly adopting solar power, not just as a cost-cutting measure, but as a long-term strategic investment. Rising electricity tariffs, the pressure to reduce carbon emissions and the growing demand for sustainable manufacturing have all pushed industries to rethink how. If you run a warehouse, processing unit, or manufacturing shop, switching to solar can drastically reduce your power costs. But there's one question that always comes first: "How big does my solar system need to be?"

" At thlinksolar, we've seen many business owners underinvest and suffer power. Proper sizing is essential to ensure the system meets your energy requirements efficiently, maximizing both financial returns and environmental benefits. Below, we explore the key aspects of solar panel system sizing for commercial and industrial applications.
