# Photovoltaic panel locking process

## Overview

---

The steps below describe the process of LOTO procedures for systems that are grid-tied, in which the inverter senses the grid and shuts off when there is no grid voltage present. Likewise, solar installers and solar PV maintenance technicians must follow lockout / tagout (LOTO) procedure, wear personal protection equipment (PPE) and follow all protection guidelines. Fall protection systems, including guardrails and personal fall arrest equipment. A proper lockout/tagout procedure is essential for these devices. For any journeyman electrician or master electrician working on solar, a deep knowledge of these rules is non-negotiable, ensuring every installation is safe and serviceable.
