# Photovoltaic panel voltage DC

## Overview

---

Most residential solar panels generate between 16-40 volts DC, with an average of around 30 volts per panel under ideal conditions. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the). Solar panel output voltage typically ranges from 5-40 volts for individual panels, with system voltages reaching up to 1500V for large-scale installations. However, the actual voltage fluctuates based on temperature, sunlight intensity, shading, panel age and quality. The circuit is open as there is no load, so there is no flow of current. Understanding them can help you enhance solar panel efficiency.
