

PIENAAR ENERGY (PTY) LTD

**Photovoltaic panels southwest
direction**

Overview

Pointing the panels slightly southwest, in the direction of the setting sun, allows the panels to produce more energy in the evening when people are home and using more appliances. East-West Orientations Offer Strategic Value: While producing 75-85% of south-facing output, east and west-facing panels can provide superior financial returns by aligning with time-of-use electricity rates and matching typical household consumption patterns. Latitude-Based Angle Calculation. In most cases, the best direction for solar panels is facing south 1. Arrays that are appropriately oriented can improve energy output by up to 30% or more 2. Solar panels see a drop in solar power production when faced away from the true south.
