Photovoltaic power generation and battery energy storage data

Overview

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. In 2024, generators added a record 30 GW of utility-scale solar to the U. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. EIA's latest monthly "Electric Power Monthly" report (with data through Novem), once again. We express our gratitude to the whole First Solar organization for providing substantial contributions to this project in the form of a fully operational 430-kW photovoltaic (PV) power plant and control system, valuable guidance, and countless hours of engineering and logistics support.
