## Overview

---

The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. The existing energy storage systems are mainly divided into five categories: mechanical energy storage, electrical energy storage, electrochemical energy storage, thermal energy storage and chemical energy storage. As grid-connected PV capacity continues to increase, its impact on the power grid grows, creating greater growth opportunities for energy storage. PV combined with energy storage offers numerous benefits. Photovoltaics. Utility-scale PV generation. With more than 45 GW of utility-scale PV projects in the pipeline at the beginning of 2021, the US is on track to grow total utility-scale PV capacity coupled configurations.
