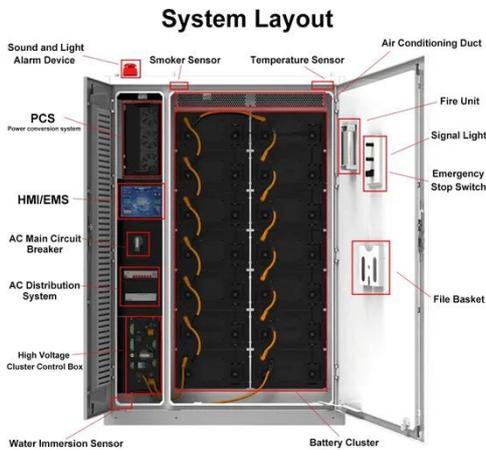

Photovoltaic power station adds photovoltaic panels

Overview

Photovoltaic Power Plants: Convert sunlight directly into electricity using solar cells and include components like solar modules, inverters, and batteries. A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power. This process occurs when photons from sunlight strike a material, typically silicon, and displace electrons, generating a direct current (DC). While effective, these sources contribute significantly to greenhouse gas. There are two types of solar power stations: photovoltaic and thermodynamic/concentrated.
