

PIENAAR ENERGY (PTY) LTD

Photovoltaic support pad equipment

Overview

Solar mounting pads provide a durable, watertight barrier between racks, footings, or supports and the roof membrane. Without them, equipment can cause abrasion, compression damage, or membrane wear that compromises roof performance and may void the warranty. Avoid the possibility of system downtime and protect the performance of your solar farm's system components by implementing Pad Support during. C-SADDLE™ is the next generation protection between the pipe and pipe support that stops dangerous crevice corrosion. C-SADDLES™ are a major improvement on current technologies in crevice corrosion protection. What makes the C-SADDLE™ process so much better?

The C-SADDLE™ uses a flat siding surface. When it comes to solar panel installations, every component plays a critical role in ensuring long-term performance—and the rubber pad for solar panel is no exception. The system can be used on virtually any industrial or commercial building with a flat or low slope roof. Supports for high and low profile installations are available.

Photovoltaic support pad equipment

Photovoltaic support pad specification standard

Structures with open grid framing and without a roof deck or sheathing supporting photovoltaic panel systems shall be designed to support the uniform and concentrated roof live loads specified in ...
