

PIENAAR ENERGY (PTY) LTD

Planned ev charging stations

Overview

The United States is set to gain thousands of electric-vehicle (EV) charging stations in the next five years. As EV demand growth moderates, investors and developers of EV charging infrastructure are exercising increased caution, leading to a reassessment of expansion. Access to public charging points is key to supporting mass adoption. Home charging remains the most popular way to charge for EV owners. However, more public chargers are needed to support mass adoption of EVs among segments of the population without access to home chargers. A robust charging network provides reliable and accessible charging options for EV drivers across the transportation sector – from light-duty passenger vehicles to micromobility solutions. The NEVI program provides \$7. On paper, there were no obvious red flags.

Planned ev charging stations

The US planned to install thousands of EV

President Biden has long vowed to build 500,000 electric vehicle charging stations in the United States by 2030. Those stations, the White House said, would help Americans feel confident
