## Overview

---

In this article, we'll explain why your solar panels may be underperforming and the actions you can take to mitigate and monitor your risk. Why Not Use Cells Directly?

The electrodes are exposed to air, making them prone to oxidation. A single crystalline silicon cell has low power output, with a voltage of only about 0. Underperforming solar panels can result in decreased energy output and longer. When thinking about solar panels, the word reliability is the one that comes to mind. The number of solar panels installed worldwide increases yearly with technological advancements, increasing environmental awareness, and decreasing costs.
