

PIENAAR ENERGY (PTY) LTD

Renewable energy growth port of Spain

Overview

Spain will offer EUR 212 million (USD 246.9m) in grants to adapt state-owned ports for offshore wind and other marine renewables in an effort to strengthen logistics capacity and build a domestic industrial supply chain, the ministry for the ecological transition said on Wednesday. Offshore wind. CPS will carry out the analysis and mapping of present and future renewable energy generation Installations in the ports of the Spanish port system. This work, promoted within the framework of the State-owned Port System -which integrates 46 Ports of General Interest and 28 Port Authorities under. The government activates six support schemes totalling €1. A line-by-line overview of all active calls, including budgets, deadlines, requirements and eligible applicants. Green ports strive to minimise their environmental impact through measures to improve and control air, water, noise and waste quality, as well as reducing emissions. One of the key benefits of green ports is their ability to provide power to ships from land-based energy sources, including renewable. The president of the Port Authority, Rubén Ibáñez, said today that PortCastelló “continues to make progress in its strategy to become a Mediterranean offshore wind hub that will allow us to lead offshore wind power in Spain”. Spain calls for the deployment of three gigawatts of floating offshore wind capacity by 2030 and plans to carry out its first.
