

PIENAAR ENERGY (PTY) LTD

Residential photovoltaic panel installed capacity

Overview

Of the total solar capacity installed in the U., over 26 percent corresponds to residential installations. This segment has grown in recent years, reaching some 4.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW. Solar is becoming an increasingly important energy resource in the United States. Department of. Roof Load Capacity is Rarely a Limiting Factor: Solar panels add only 3-4 pounds per square foot to roof load, well within the 20+ pound capacity of most residential roofs. The real constraints are typically usable roof space after accounting for required 3-foot setbacks and obstruction clearances. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives. NLR's PV cost benchmarking work uses a bottom-up.
