

PIENAAR ENERGY (PTY) LTD

Rooftop distributed photovoltaic company rents energy storage system

Overview

The rooftop PV leasing model allows companies to use solar energy without any investment. It is sufficient to lease out unused roof space to receive either fixed rent or discounted green electricity. All costs for procurement, construction, and maintenance are borne by the investor. DPPs are made up of Distributed Energy Resources (DERs). LZY mobile solar systems integrate foldable, high-efficiency panels into standard shipping containers to generate electricity through rapid deployment generating 20-200 kWp solar. In order to meet the diverse needs of businesses in energy cost control and asset value enhancement, the main cooperation models for commercial rooftops currently include the self-consumption model and the roof lease model with zero investment. Enterprises can choose the most suitable solution. However, there is a flexible solution that works without any initial costs – by renting a solar system. And, if you have battery back-up, you feel safe knowing your lights can stay on if the power goes out. Your solar array can do so much more.

Rooftop distributed photovoltaic company rents energy storage systems

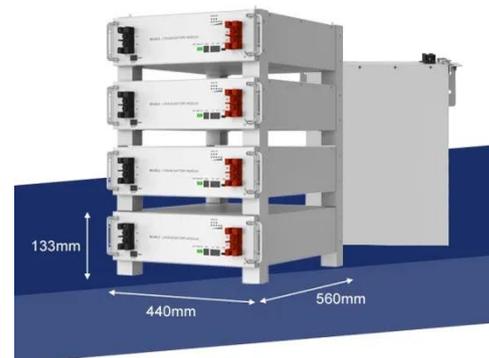

Solar Container , Large Mobile Solar Power Systems

Ready to harness solar power? Contact our team today to discuss your solar energy needs and discover how our solar pv containers can power your business sustainably.
