Rooftop photovoltaic bracket explanation

Overview

Photovoltaic mounting systems (also called solar module racking) are used to fix solar panels on surfaces like roofs, building facades, or the ground. Solar panels can't be put on a roof without first having mounting brackets installed. The materials used to manufacture and install photovoltaic arrays must be able to withstand various harsh environments at the project site to ensure 25 years of weather resistance and corrosion. A solar mounting bracket —often called solar racking or a mounting system—is the engineered backbone of any photovoltaic (PV) installation. Our photovoltaic bracket structure explanation diagram set reveals what engineers won't tell you.
