

**PIENAAR ENERGY (PTY) LTD**

# **San jose energy storage station discharge time**

## Overview

---

The batteries will be charged from the grid during the day and will discharge power at night during peak electricity demand. Our innovative solar + battery storage project is now producing power. The unique format of this 12-year agreement guarantees the delivery of 62 MW of renewable energy between 6:00 a. every day (16 hours, 7 days a week). This article explores the plant's location, technical specs, and why it matters for the clean energy transition—perfect for investors, policymakers. San José's Planning Commission approved a conditional use permit (CP24-015 / ER24-139) for a 100 MW battery energy storage facility at 6150 San Ignacio Avenue on an approximately 5.5-acre site currently used for vehicle storage. The project includes battery modules, inverters, and a collector. Before the Metcalf Energy Center can be built, it must first go through two separate rigorous year-long technical and environmental review processes that will be conducted by the California Energy Commission (CEC) and the City of San Jose. It is currently anticipated that the public hearing, review. Maximum battery charge or discharge powers of the battery are the maximum charge or discharge power values, which are allowed only for a short period of time (e.
