Tank Thermal Energy Storage

Fig. 6.2 shows the schematic diagram of a TTES. In the charging cycle, the cold water is sent to the heater (a solar collector module here, as an example) from the bottom of the tank and injected from ...

Illustration of Solar Water Heater System Design

In summary, a solar water heater system captures solar energy through a solar collector, transfers it to a heat transfer fluid, and then to the water in a storage tank through a heat exchanger.

Schematic diagrams of Solar thermal systems for hot water, space

After having stored the energy for domestic use, the surplus energy is transmitted to a downstream storage tank via the secondary heat exchanger. This storage tank contains hot water used for heating.
