Sheep eating grass photovoltaic panels

ESS

40.96kWh

61.44kWh

Overview

The sheep eat the tall grass, weeds, and clover, and their chomping inhibits the vegetation from blocking the panels. Their steady consumption of forage on the land prevents grassy plants from growing high enough to block sunlight from reaching the panels, maintaining the. Sheep-based agrivoltaics is a particularly good symbiotic system where every participant benefits, states Western University's Joshua M. In today's volatile economy, job stability can often be found in unexpected places — like returning to the traditional role of shepherding. Solar. That row was part of the 15,000 solar panels that make up the Fitchburg Renewables solar farm. The project generates clean energy and feeds it into the Unitil grid. The site is also equipped with a 2. This farm was converted from an abandoned apple. In a groundbreaking study that combines renewable energy with traditional farming practices, researchers have observed remarkable changes in 1,700 sheep grazing amidst solar panels.

Sheep eating grass photovoltaic panels

Why Solar Panels and Sheep are Perfect Together

A single sheep can eat up to four pounds of grass per day and can easily fit underneath the solar panels to nibble up weeds that grow in hard-to-reach areas. Sheep grazing reduces carbon emissions, ...

Sheep & Solar: A "Beautiful Symbiotic Relationship"

Sheep and solar are good partners, as

the ruminants consume grassy plants so sunlight can reach the panels and the array stays productive.
