

**PIENAAR ENERGY (PTY) LTD**

# **Shuipi talks about photovoltaic brackets**

## Overview

---

A photovoltaic bracket is a structural device designed to hold solar panels in place on various surfaces. It acts as a supportive framework that ensures panels are securely mounted, correctly angled, and protected from environmental factors like wind, rain, and snow. The installation structure of solar photovoltaic brackets should be simple, strong and durable. The materials used to manufacture and install photovoltaic arrays must be able to withstand various harsh environments at the project site to ensure 25 years of weather resistance and corrosion. Solar Photovoltaic (PV) system as a source of renewable electricity. Solar electric power can be made available continuously for consistent on-off grid applications. Choosing the right bracket impacts system efficiency, costs, and benefits, while choosing the wrong one can lead to endless troubles. In windy w grid-connected and a stand-alone mode of operations.
