Simple parallel connection of photovoltaic panels

Overview

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box. This setup is common in 12V or 24V systems where you want to safely charge batteries or run low-voltage inverters. In this guide, we'll walk you through how. Series connections are ideal for larger home solar systems (4kW+) and long distances to the inverter, but they're vulnerable to shading issues since one shaded panel affects the entire string.
