

PIENAAR ENERGY (PTY) LTD

Solar Networked Solar On-site Energy

Overview

There are three main types of onsite solar: rooftop, ground-mount, and carport. Onsite solar can benefit the offtaker in many ways, including progress towards renewable energy goals, visible commitment to sustainability, and electricity bill savings. As organizations explore on-site options, solar energy is an attractive solution for most sustainable energy strategies. Controlling your own energy supply means more predictable and reliable energy generation that lowers costs and environmental. Onsite energy can encompass a broad range of technologies suitable for deployment at industrial facilities and other large energy users, including battery storage, combined heat and power (CHP), district energy, fuel cells, geothermal, industrial heat pumps, renewable fuels, solar photovoltaics. From universities to retail outlets and corporate HQs, the variety of buildings boasting solar panels is growing. The Port of Hull recently unveiled the UK's largest commercial rooftop solar system while Sussex University is aiming to be more energy efficient with more than 3,000 solar panels.

Solar Networked Solar On-site Energy

Why on-site renewable energy solutions are in demand

Solar panels are becoming an increasingly common sight on rooftops and car ports as more landlords and owner-occupiers get on board with the idea of onsite renewable energy. From universities to retail outlets and ...
