# **Solar Photovoltaic Power Generation Explained**

## Overview

---

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Solar panels, also called PV panels, are combined into arrays in a PV system. At a high level, solar panels are made up of solar cells, which absorb sunlight. These photons contain varying amounts of. In 1954 PV technology was born when Daryl Chapin, Calvin Fuller and Gerald Pearson developed the silicon PV cell at Bell Labs in 1954 – the first solar cell capable of absorbing and converting enough of the sun's energy into power to run everyday electrical equipment. What actually happens inside a panel?

Why does sunlight create usable power?

And how does that electricity end up running your lights.
