# **Solar inverter appears mains power**

## Overview

---

Fault phenomenon: The inverter is not connected to the grid, and the screen shows that the mains is not connected. Possible reasons: (1) The AC switch is not closed. (2) The AC output terminal of the inverter. Something is wrong if the inverter does not automatically switch to “mains” power to recharge the battery bank. There are four possible reasons for this failure to switch to mains to charge the batteries: Let's look at the process to troubleshoot and resolve the issue with your Uninterrupted Power. Signs of solar system problems and solutions often include low power production, buzzing noises, or a specific solar inverter fault codes list 2026. In many cases, learning how to reset inverter fault codes using the manufacturer's steps can resolve the issue. Many problems can be easily diagnosed and fixed. The inverter converts DC into AC power, which. If you have your system configured to act as a microgrid within your microinverters' operational range, then yes, they can provide solar power.

 **TAX FREE**    

**ENERGY STORAGE SYSTEM**

**Product Model**  
 HJ-ESS-215A(100KW/215KWh)  
 HJ-ESS-115A(50KW/115KWh)

**Dimensions**  
 1600\*1280\*2200mm  
 1600\*1200\*2000mm

**Rated Battery Capacity**  
 215KWH/115KWH

**Battery Cooling Method**  
 Air Cooled/Liquid Cooled

### If the mains fail, and I pull the main breaker, and backfeed my house

Power from the panels runs my house or goes back onto the grid if my load is small. Mains fail, panels could generate, but microinverters don't operate - I get no power from panels.
